PREFACE

The study of the recent Mollusca, *La belle science* as it has been termed, is very attractive to many intelligent persons and the interest in recent shells is widespread throughout the State. Since the publication of the illustrated descriptions of the New York Mollusca by James E. De Kay in 1843, as a part of the Natural History of New York, only occasional efforts have been made by the State Museum to bring present knowledge of these creatures to a fuller expression. It would doubtless be well, after this lapse of more than 60 years, to portray in monographic detail the molluscan fauna of the State in its scientific and economic bearings. Pending the inauguration of such an undertaking, it is believed that the complete list of species of our Mollusca with references to places of description herewith presented, will serve a useful purpose. It comprehends all verified species of our molluscan fauna and it invites suggestions and emendations from students of the subject. This list has been prepared at the suggestion of my predecessor in office, Dr F. J. H. Merrill, by Miss Elizabeth J. Letson, director of the Museum of the Buffalo Society of Natural Sciences, a keen and accomplished student of this branch of science.

PUBLICATIONS

Postage or express to places outside of New York State must be paid in addition to the price given. On 10 or more copies of any one publication 20% discount will be given, the buyer to pay transportation. Editions printed are only large enough to meet special claims and probable sales. When the sale copies are exhausted, the price for the few reserve copies is advanced to that charged by secondhand booksellers, in order to limit their distribution to cases of special need. Such prices are inclosed in [ ]. All publications are in paper covers, unless binding is specified.
